Emergency Monitoring Unit

The miALERT A200 is an affordable emergency communication solution that does not compromise on features or functionality. miALERT A200 benefits both the resident and the facility.

- Instant two-way voice communication for immediate emergency assessment and response is established with appropriate staff members.
- Wireless transmitters activate the miALERT A200 from anywhere within the resident's apartment.
- Simple to program, reconfigure and add additional remote transmitters as required.
- Unprecedented ease of installation and programming—connect to your existing power and analog telephone cabling.

- Add-on capability for up to eight wireless devices per miALERT A200 unit.
- Integration modules for wired sensors including smoke detectors, water sensors, door contacts, temperature sensors, carbon monoxide detectors, toilet flush sensors and check-in devices.
- Low cost scalable nurse call solutions, offering exceptional value and functionality for all types of facilities.
- miLINK Event Management Server integration, during an emergency, server notifies and escalates based on pre-determined call flow information. Information is recorded for reporting. Emergency Alert notification is sent to staff telephones, mobile device, email, TTS, and SMS.
